Archetype

Innovative School Centre

Archetype team - 10/08/2020

Our project for a new School Centre proposes the creation of a new urban centrality in the wider region of South Palermo. The project creates a new territorial reference by establishing a synergy between the school programme and the formation of a new landscape open to the community. This synergy understands the Innovative School Centre as an opportunity for a sustainable regeneration of the urban environment of the area. The natural environment that is established by the school becomes also the common denominator of the educational programme and the school life in general. The environmental concerns become the innovative aspect of the educational programme.
