Archetype

Macau Valley

Archetype team - 10/07/2026

The project emerges from a close reading of the site’s topography and the surrounding urban fabric. The two defining streets that surround the plot have a difference of three floors between the higher and lower points. Rather than treating the slope as a limitation, the building integrates it as a defining feature. Its base expands to merge with the terrain, minimising excavation and anchoring the project into the landscape. From there, the volume terraces upwards, eventually resolving into a clean rectangular profile in line with city guidelines and neighbouring buildings. This approach ensures both contextual continuity and a distinctive architectural identity.
